The usual precautionary measures are to be adhered to when handling chemicals.
Keep away from foodstuffs, beverages and feed.
Wash hands before breaks and at the end of work.
- **Respiratory protection:**
Not necessary if room is well-ventilated.
Where protection is desired:
Respirator with combination filter for vapor and particulate (EN 141).
Respirators and components must be tested and approved under appropriate government standards such as NIOSH. (U.S.) or CEN (EU).
- **Protection of hands:**

Recommendation: Chemical resistant protective gloves (EN 374)

- **Material of gloves**
Nitrile rubber, NBR
Chloroprene rubber, CR
Recommended thickness of the material: ≥ 0.4 mm
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- **Penetration time of glove material**
Value for the permeation: Level 6 = >480
The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
Supplementary note: The specifications are based on own tests, literature data and information of glove manufacturers, or is derived by analogy with similar substances. It should be noted, that the practical usage of a chemical-protective glove can in practice due to many influencing factors (eg temperature) may be considerably shorter than the permeation time determined through testing. Due to the large variety the instructions of the manufacturer must be observed.
- **Eye protection:**

Use safety glasses according to EN 166 : 2001.

- **Body protection:**
Impervious protective clothing
