

INFORMATION & INSTRUCTIONS

Thank you for purchasing this bag of MO Bacter.

The following information and instructions are taken from information printed on the 20kg bags of MO Bacter. Please read carefully to ensure best results.

PRODUCT INFORMATION

An organic based lawn feed which will feed your lawn for up to 100 days. MO Bacter is the ideal lawn treatment for lawns with moss infestation and contains extra magnesium which gives a strong green colour to your lawn. MOBacter is organic and will not burn the grass when applied correctly. Leave the lawn for 7-10 days after applying MO Bacter before mowing so that it can get to work. The fertiliser will help prevent moss from redeveloping. It will not stain paths, patios, terraces, concrete or clothing. MO Bacter has an indirect action against moss and reduces the tendency for re-infection. After application there is no need to rake out the dead moss which will become apparent after 2-3 weeks. This dead moss disappears into the thatch layer where bacteria start the process of digesting it. MO Bacter feeds the lawn for 100 days, enriches the root zone with organic matter and increases soil fertility. The crumbed granules are easy to spread with any kind of spreader and may also be spread by hand.

WHEN TO APPLY?

Apply MO Bacter from March through to September at a rate of 100-150g/m² **when the air temperature is 12 C degrees or above** and repeat the treatment after 100 days.

If it doesn't rain for more than a week after application we recommend watering to activate the fertiliser.

HOW TO CONVERT A LAWN WITH MOSS INFESTATION TO A LAWN YOU CAN BE PROUD OF IN 5 EASY STEPS:

STEP 1: Apply BIO Lime in Autumn/Winter (Feb-April)

STEP 2: Apply MO Bacter in Spring/Summer (March-June)

STEP 3: Apply MO Bacter in late Summer/early Autumn (Aug-Oct)

STEP 4: Apply BIO Lime in Autumn/Winter (Sept-Nov)

STEP 5: Apply Autumn Lawn Feed in Autumn/Winter (Sept-Nov)

- **BIO Lime** is the ideal treatment for lawns with a low pH level. It gives your lawn a healthy green colour and promotes healthy thriving growth.
- **Autumn Lawn Feed** (10kg) with added Humifirst stimulates root growth and greens, thickens, and strengthens the grass over Winter.

MO BACTER FAQs

We hope the information below will help you understand and use the product more effectively.

What is MO Bacter exactly?

MO Bacter is an Organic-based slow-release granular fertiliser which will feed your lawn for 100 days, destroys moss without turning it black and remove the need of raking out the dead moss.

What does it do?

MO bacter applies essential nutrients to the lawn including an extra dose of potassium which moss can't tolerate. The moss dies off as a result of potassium overdose while the strength of grass improved.

Within 3-4 weeks of application, under ideal conditions, the moss turns brown. A short time afterwards the dead moss will start to disappear as the beneficial bacteria in MO Bacter digests the dead material.

The slow-release granules continue to feed the lawn for up to 100 days, ensuring a healthy lawn that you can be proud of.

How do I apply it?

Apply MO Bacter at the rate of one handful (about 200 grams) per 2 sq metres. Can be applied straight after cutting. A 10 Kg bag will cover approx. 100 square metres. A 20 Kg bag will cover approx. 200 square metres.

When do I apply it?

MO Bacter is best applied from early March through to early June for healthy grass and moss control, but can also be very successful when used in early autumn, as it prepares the grass for winter. There is no need to wait three days after cutting – you can apply straight away.

What are the best conditions for applying MO Bacter?

MO Bacter works best when soil temperature reaches **10 C degrees (this equals to 12 C degrees of air temperature)**, so warm, damp conditions are ideal.

How do I store MO Bacter?

Keep MO Bacter in cool, dry conditions, stored in the plastic bag provided, and secured at the top. You can continue to use the product for up to 12 months.

What are the advantages of MO Bacter?

There are many advantages: MO Bacter is organic, slow release, does not mark stonework, does not harm children, animals or plants, and it destroys moss and eradicates the debris.

Cuttings from the lawn can be added to compost heap as the product does not contain any chemicals.

Who produces MO Bacter?

MO Bacter is produced by:

Viano Organics - Rendapart NV, Industriepark Noord V, Wijngaardveld 36, B-9300 Aalst, Belgium

Safe for children and pets: subject to normal / correct use.

Viano cannot be held responsible for any damage caused by the incorrect application of the product.
