

# Moximate WDG

## A fungicide for the control of potato blight

Moximate contains cymoxanil and mancozeb, which combines the local systemic properties of cymoxanil and the protectant activity of mancozeb for the control of potato blight.

- Can be used on all varieties of early & main crop potatoes
- Fast Acting: Rapid uptake and penetration into the leaf
- Translaminar: cymoxanil moves within the leaf
- Curative: Independent trials have shown that cymoxanil has a kick back effect of up to 3 days
- Protectant: The full rate of mancozeb provides protection of blight on the leaf.

The rapid penetration of cymoxanil into the leaf and its post-infection, curative activity means that cymoxanil provides blight protection both inside and outside the leaf and is effective even in wet weather

## Moximate WDG

PCS No:	04670
Pack Size:	10Kg
Contains:	4.5% cymoxanil 68% Mancozeb
Application Rate:	2.5kg/ha
Max no. applications:	4
Harvest Interval:	7 days
Pack Treats:	4ha (10 acres)
