

Technical Information Sheet

Thistlex is for control of creeping thistle and spear thistle in established grassland.

Key facts

HERBICIDE

Product Registration Number:	PCS 03831
Active Ingredient:	200 g/litre clopyralid + 200 g/litre triclopyr
Pack size:	1.0 L
Formulation:	Solution concentrate
Maximum Individual Dose:	1.0 L/ha
Maximum Total Dose:	1.0 L/ha
Latest Timing:	7 days before grazing or cutting
Water Volumes:	200-400 L/ha. Can be reduced down to 200 L/ha with low drift nozzles
Spray Quality:	Medium as defined by BCPC

Key benefits

- Outstanding control of creeping thistle and spear thistle
- Has additional activity against common nettle, dandelion and additional broad-leaved weeds (see table on reverse)
- Suitable for use in silage fields, hay meadows and grazing pastures
- Grazing can resume 7 days after application
 - · This may need to be longer if foliage of poisonous weeds is present
- Thistlex is translocated to the roots meaning long term control
- Rainfast in 2 hours with excellent grass safety

Best use advice

- Single application per year supported
 - Applications should only be made between 1 March and 31 October
- Should only be used on grassland that is > 12 months old
- · For best results apply when thistles are actively growing and have reached the rosette stage:

Too early

Just right
Rosette (up to 200 mm high)

Too late

- If the thistles are too big cut grass and apply 2-3 weeks later to the re-growth
- Apply Thistlex at a dose rate of 1.0 L/ha in 200 L/ha of water
 - · Higher water rates should be used where weeds are large or where grass cover is dense
- Thistlex can be applied via a boom quad bike sprayer at a rate of 50 ml in 10 L water
 - 250 ml in 50 L water will cover an area of 2,500 m²
- The label prohibits the use of Thistlex via hand-held equipment
- · Allow 2-3 weeks after cutting or grazing before applications of Thistlex are made to allow sufficient re-growth
- Grass or clover can be stitched in 6 weeks after application.
- After application of Thistlex livestock should be excluded for at least 7 days and an interval of at least 3 weeks should be observed before cutting
- · Thistlex should not be tank mixed with phenoxy herbicides this may compromise translocation of Thistlex to the roots

January 2023, this version supersedes all previous versions.
